- Dramatically reduces backup and recovery times

DATA GUARDIAN® MESSAGE ARCHIVE

E-DISCOVERY • RECORD RETENTION • COMPLIANCE • STORAGE MANAGEMENT

MAJOR COMPONENTS

Discovery & Legal Searches

Organizations are spending millions of dollars and countless resource hours trying to recover and search e-mails or instant messages as well as any attachments from backup tapes. On top of this, firms have faced fines in the tens of millions of dollars for being unable to respond quickly enough to a litigation request.

Without a Discovery & Litigation Support work flow tool in place, your legal and HR department are fully dependent on IT to locate and retrieve sensitive information from a backup server.

DataGuardian Message Archive (MA) allows companies to access and search their own archives in real time:

- Full-text searching to find exactly what is needed
- Redaction tools to flag information for relevance
- Ability to convert results to PDF, PST, NSF files

Supervision, Compliance & Surveillance

Imagine a solution that helps your business comply with regulations and avoid lawsuits by proactively analyzing the content of e-mails and instant messages.

Companies can use DataGuardian MA to monitor messages for federal regulations (SEC, NASD, Sarbanes-Oxley, HIPAA, FERC, etc.) along with internal/HR policies.

User Productivity

"Stubbing" of e-mails gives users seamless access to their data. Having a solution that provides every e-mail user with an "unlimited mailbox" allows for the following benefits:

- Avoids the loss of important messaging data
- Reduces the time needed to manage ones e-mail mailbox and archive
- Increases the accessibility to messaging data through a centralized search
- End-user capability to restore a message without involving IT

Individual end users want access to their messages anytime from anywhere, with the ability to organize and store all of their work products in e-mail folders.

Centralized Enforcement of E-Mail Policy

- Keep e-mail for a set period of time managed automatically
- Eliminate e-mail that is unmanaged and unknown
