

KEY BENEFITS

- Continuous Data Protection
- Recovery Assistant Self-Serve Recovery Wizard
- Off-Site Protection
- Ease of Use
- Fully Automated
- Predictable Subscription Based Payment
- Lessens Burden on IT Staff
- Delta Block Elimination
- Adaptive Scanning Technology for Maximum Transparency
- Disconnected State Support
- Automatic Bandwidth Usage Throttling
- System Rollback

Continuous Data Protection for Laptops and Desktops

DataGuardian *LT* is a managed PC protection service delivered by IPR using enterprise class software; secure enterprise datacenters, and highly trained technicians. DataGuardian *LT* provides a unique combination of data recovery, system repair and data migration tools tailored specifically for common problems PC users encounter. It drastically reduces the total cost of ownership for a PC fleet by safeguarding company data while increasing employee productivity and reducing helpdesk support requirements.

DataGuardian *LT* works transparently without interfering with end user productivity. Because DataGuardian *LT* is provided as a managed service, minimal IT involvement is required while users receive high service levels. For your users, it provides self-serve file recovery and comprehensive disaster recovery tools in the event of a total PC loss.

Recovering data using DataGuardian *LT* is simple. For file recoveries, end users can recover their data without IT assistance using a simple wizard. When a total PC loss occurs, DataGuardian *LT* delivers true bare metal recovery. Or if your organization's policy is building PCs using ghost images, DataGuardian *LT* can be used to recover all of the user's data to the imaged machine.

Certified IPR technicians centrally manage and monitor all backed up data, freeing your IT administrators to focus core operations.

DATA GUARDIAN[®] LT

PC BACKUP AS A MANAGED SERVICE

EXPERIENCE
Founded in 1998
IPR Protects Client Data in 17
Countries around the Globe

KEY FEATURES & BENEFITS

Real Time Protection

CDP technology monitors files for changes and backs up data as it is saved, thus ensuring recovered data will be as recent as the last save

Transparency

Data is backed up automatically, without end-user work pattern interference or network overload

Disconnected State Support

DataGuardian LT protects PC data in a disconnected state, backing up laptops even while they're roaming

Policy Enforcement

Administrators can enforce consistent backup policies across the WAN and can control features available to individual users

Remote Administration

Malfunctioning systems can be remotely repaired

Self-Serve File Recovery

Users can recover their own files without the help from IT staff, lowering TCO and improving productivity

System Rollback

Versioning capability allows malfunctioning systems to be easily restored without time consuming troubleshooting

True Bare-Metal Disaster Recovery

Lost, stolen or unbootable PCs and laptops can be completely restored without the need to reinstall the operating systems and applications; the procedure takes only hours (vs. days)

De-duplication and Compression

Data compression and redundant file elimination increase storage efficiency and also minimizes impact on network bandwidth

A Truly Unique Partnership
of Technology, Experience
and Expertise.

DATA GUARDIAN LT HIGHLIGHTS

Transparent Continuous Data Protection

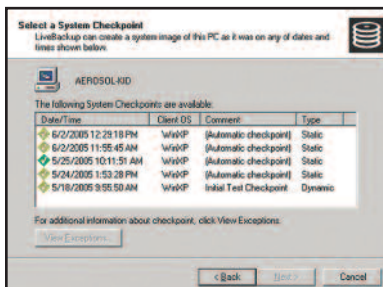

DataGuardian LT offers Continuous Data Protection and acts transparently in the back-end of your end-users PCs. The end-user does not have to worry about anything while his/her critical data is being backed up. There is no need anymore for scheduled backups of your desktops and laptops. DataGuardian LT runs silently and catches all the changes while they occur and send them to the backup server. On top of that, the data is also protected even when the machine is not connected to the network. DataGuardian LT is finally able to track and backup hard-to-protect outlook inboxes.

Seamless Data Recovery

DataGuardian LT gives you the assurance that you can restore any data as recent as the last save. It also gives you the ability to roll back an entire system to a "good" state in hours. The end-user's self-serve restore capability lightens IT loads and minimizes downtimes, lowering TCO and improving productivity.

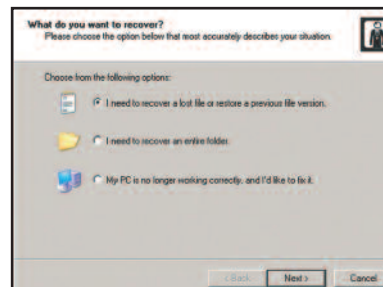

IPR Centralized Administration & Management

IPR technicians centrally manage all backed up data from all desktop and laptops, including remote users. There is minimal impact on network bandwidth as data compression and redundant file elimination significantly reduce traffic.

System Image Wizard

Create a System Image to roll back to a previous state

Recovery Assistant

Point and Click Interface makes file recovery simple!

DataGuardian LT

Minimum System Requirements

- Windows 2000 Professional or XP
- Intel Pentium III or AMD Athlon
- 64 MB RAM (128 MB recommended)
- 100 MB free disk space
- TCP/IP
